

Note on use of coils NEL for Minelab Explorer metal detector:

EXTREMELY IMPORTANT!

Due to the high quality thick insulated wire it is a little difficult to pull the wire thru the lower shaft. Please follow directions below as not to void the warranty.

Gently pull coil wire thru the lower shaft with a piece of string. Be sure NOT to stretch out the pig tail wire below the connector. This will void the Warranty. Once the wire is thru, slide middle shaft over lower shaft. Connect the coil to the detector. Slide the middle shaft in to the upper handle behind the control box. Please note that you will not be able to shrink the detector down to a size that will fit into your carry bag due to the thickness of the wire.

Please note that this inconvenience is well worth the performance enhancement you will gain with the NEL coil.
